

# ANNIS: Search and Visualization in Multilayer Linguistic Corpora

Carolin Odebrecht &  
Florian Zipser  
Humboldt-Universität zu Berlin

## **ANNIS workshop**

2014-08-26

# A brief introduction

- Search and Visualization in Multilayer Linguistic Corpora
  - Imports existing corpora
    - Corpora already have to be annotated, ANNIS only uses what's there
    - No NLP!

# A brief introduction

- Search and Visualization in Multilayer Linguistic Corpora
  - Makes corpora searchable
    - One query language for all corpora (AQL)
    - Abstraction over linguistic data necessary
    - But: Corpora have different annotations → query has to match the annotations

# A brief introduction

- Search and Visualization in Multilayer Linguistic Corpora
  - Displays corpora
    - Many visualizations available
    - Corresponding to type of annotation (syntactic trees, phrase trees (RST), grids, coreferences ...)

# A brief introduction

- What ANNIS cannot do
  - Does not know how to speak natural language  
→ so you have to learn AQL

# A brief introduction

- What ANNIS cannot do
  - Does not know how to speak natural language  
→ so you have to learn AQL
  - ANNIS does not know any semantics  
→ „NN“, „NP“, „sentence“, „word“, „my favorite annotation“ ... are just sequences of characters

# A brief introduction

- What ANNIS cannot do
  - Does not know how to speak natural language  
→ so you have to learn AQL
  - ANNIS does not know any semantics  
→ „NN“, „NP“, „sentence“, „word“, „my favorite annotation“ ... are just sequences of characters
  - You need to be exact  
→ e.g. „POS“ != „pos“ and „NN“ != „NN “ (regard the blank)

# ANNIS basics

# ANNIS: Search and Visualization in Multilayer Linguistic Corpora

The screenshot shows the ANNIS interface with several key features highlighted:

- Enter query**: A red box highlights the search input field where the query "cat='NP'" is entered.
- Virtual Keyboard (e.g. arabic)**: A red box highlights the keyboard icon in the toolbar, which provides a virtual keyboard for inputting non-Latin characters like Arabic.
- Previous queries**: A red box highlights the "History" dropdown menu in the toolbar, which lists previous search queries.
- Corpus list**: A red box highlights the "Corpus List" section at the bottom left, which displays a table of available corpora. The table includes columns for Name, Texts, and Tokens. The "pcc2" corpus is selected and highlighted in blue.

The main search results area on the right shows a list of example queries with their descriptions and links to open the corpus browser.

Example Query	Description	Link
lemmat="sein"	Search for all words with the lemma "sein" in documents	pcc2
tok!="ist"	Search for all words that are not "ist"	pcc2
/.*lich/	Search for words ending with "lich" (regular expression)	pcc2

Visualizations

# ANNIS: Search and Visualization in Multilayer Linguistic Corpora

The screenshot shows the ANNIS interface with several windows open. On the left, there is a 'Corpus List' window showing a table of corpora with columns for Name, Texts, and Tokens. A red box highlights the row for 'pcc2'. An arrow points from this row to the 'Corpus metadata' window on the right. Another red box highlights the 'Corpus metadata' window itself. This window has tabs for 'Base text' and 'Token Annotations', and is currently displaying 'Corpus information for pcc2 (ID: 5664)'. It contains two main sections: 'Metadata' and 'Available annotations'. The 'Metadata' section lists various properties of the corpus, such as URL (link), annotation\_description (POS, lemma, morphology, etc.), annotation\_levels (pos;lemma;morph;Inf-Stat;Focus\_newInf;PP;NP;Topic;Sent;Foc\_c, etc.), full\_name (Potsdam Commentary Corpus (sample of 2 documents)), language (German), source (Project D1, SFB 632), and version (6.0). The 'Available annotations' section lists various node annotations with their examples and URLs.

searching for **all** nouns

**pos=/N./**

73 hits (pos="NN" 62 hits)

searching for **all** adjectives

**pos=/ADJ./**

32 hits (pos="ADJA" 18 hits)

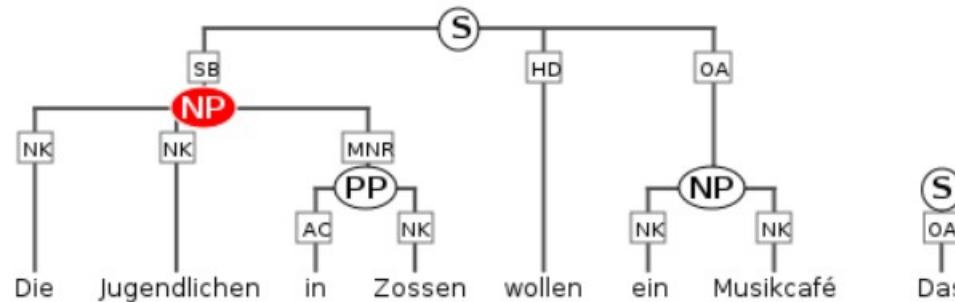

- Span annotation

searching for all NPs

**cat="NP"**

41 hits (pos="NN" 62 hits)

e.g. *Die Jugendlichen in Zossen*

- Relations between attributes
  - searching for all NPs which contain a preposition
  - `cat="NP"` 41 hits
  - `pos="APPR"` 19 hits
- e.g. *Die Jugendlichen in Zossen*  
→ no relation between the two information!

- Relations between attributes

searching for **all** NPs which contain a preposition

`cat="NP"`

#1

`pos="APPR"`

#2

e.g. *Die Jugendlichen in Zossen*

→ NP includes APPR

- Relations between attributes

searching for **all** NPs which contain a preposition

```
cat="NP" &  
pos="APPR" &  
#1_i_#2
```

e.g. *Die Jugendlichen in Zossen*

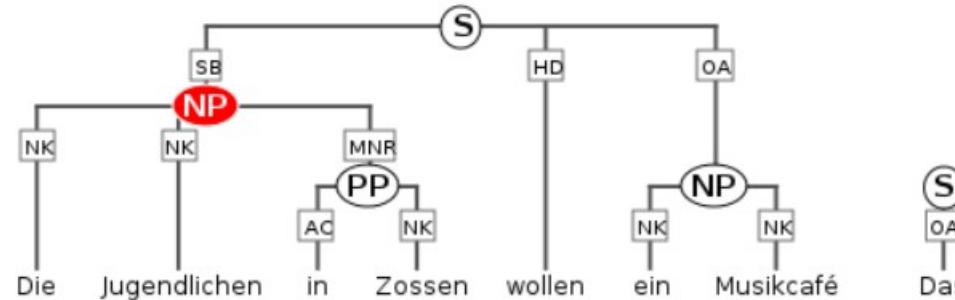

- Relations between attributes

searching for **all** NPs which are **objects**

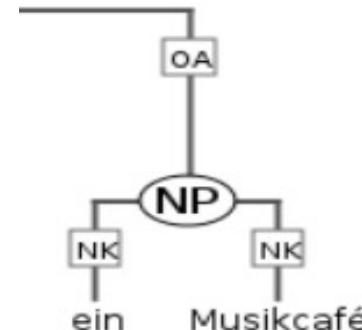

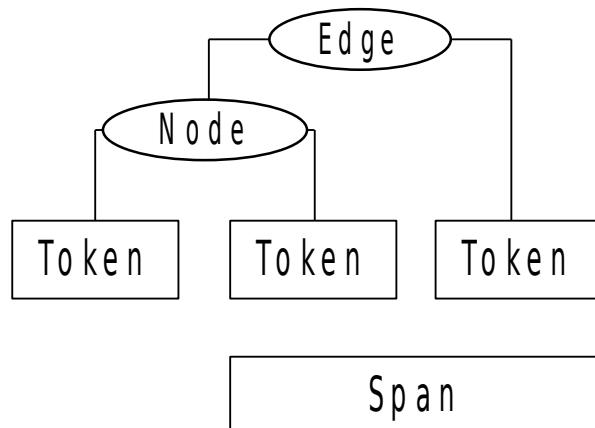

**cat="NP"**

e.g. *Die Jugendlichen in Zossen -->subject!*

- Relations between attributes
  - searching all **NPs** which are **objects**
    - **NP** → node annotation
    - **OA** → edge annotation

- Relations between attributes  
searching all NPs which are objects

`cat="NP"`

the syntactic function in the tree

`func="OA"`

→ Note: At least there are two elements which relate in a way to each other!

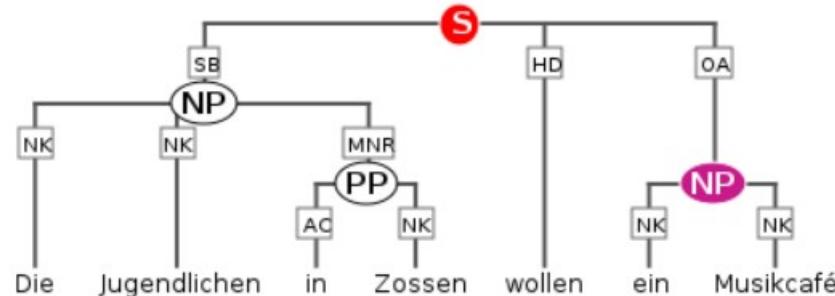

# Hierarchy relations

- Relations between attributes

searching all NPs which are objects

```
node & cat="NP" & #1 >[func="OA"] #2
```

e.g. *ein Musikcafé* -->object!

- Relations we used:

A\_i\_B

A includes B

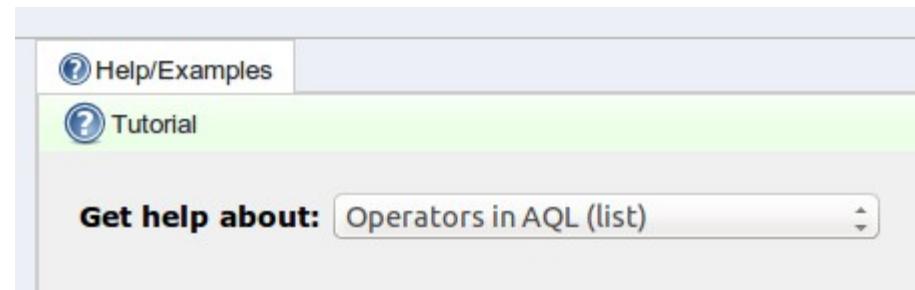

A > B

A dominates B

A >[func="OA"] B

A dominates B and B is an object

The full list of relations can be found in ANNIS

ANNIS: Search and

Multilayer Linguistic  
Corpora

What's new in  
ANNIS

# What's new in ANNIS

## version 3.1.7

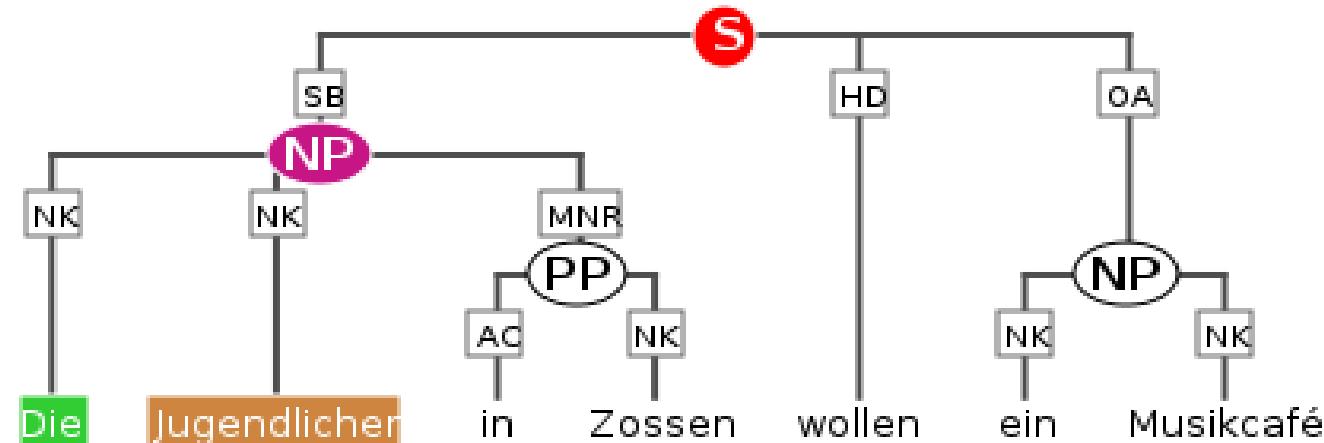

- Simplified syntax (AQL)
- Frequency analysis (Visualisierung)
- Expand match context (Visualisierung)
- Equality and Inequality (AQL)
- Variables (AQL)
- Complex OR expression (AQL)
- Document browser (Visualisierung)
- CSV export (Visualisierung)
- Tooltip for corpus names (Visualisierung)
- Report problem (Visualisierung)

## Simplified syntax

- Question:

„Die“ followed by „Jugendlichen“ both being dominated by a prepositional phrase which is dominated by a sentence

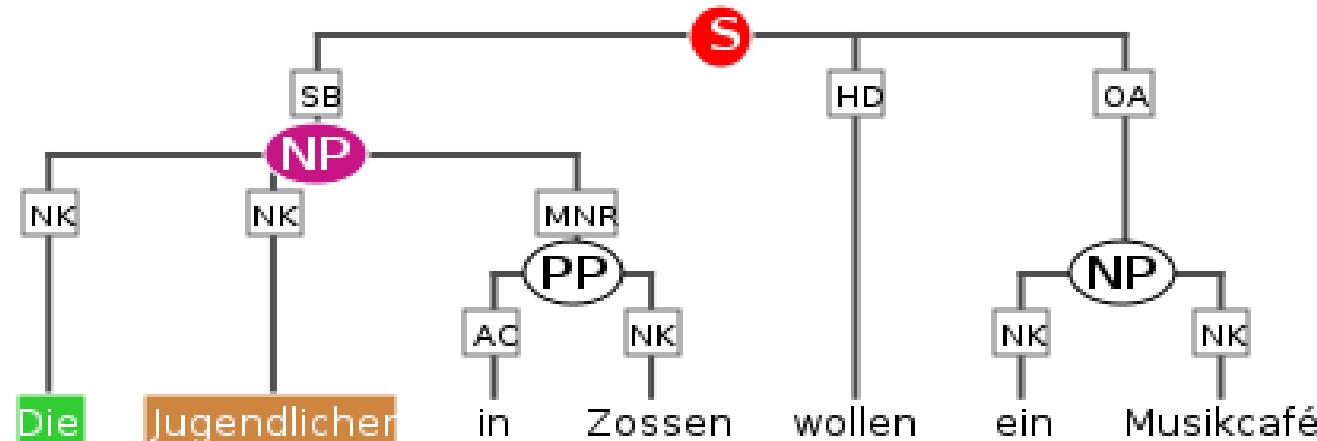

So far:

```
cat="S" & cat="NP" & "Die" & "Jugendlichen" & #1 > #2 & #2 > #3 & #2 > #4 & #3 . #4
```

# Simplified syntax

- Question:

„Die“ followed by „Jugendlichen“ both being dominated by a prepositional phrase which is dominated by a sentence

So far:

`cat="S" & cat="NP" & "Die" & "Jugendlichen" & #1 > #2 & #2 > #3 & #2 > #4 & #3 . #4`

Simplified:

`cat="S" > cat="NP" > "Die" . "Jugendlichen" & #2 > #4`

- Question:
  - How many words tagged as „NN“, „ADJA“ or „ADV“ does a corpus contain?
  - What are the most frequent part-of-speech tags followed by a noun?
  - What are the most frequent part-of-speech tags in a prepositional phrase, which is in a sentence?
  - ...

# ANNIS: Search and Visualization in Multilayer Linguistic Corpora

## Frequency analysis

The screenshot shows the ANNIS interface with the following steps highlighted:

- An orange arrow points down from the search results area to the "Frequency Analysis" button in the search toolbar.
- An orange arrow points left from the "Frequency Analysis" button in the search toolbar to the "Frequency Analysis" tab in the main window.
- An orange arrow points left from the "Frequency Analysis" tab to the "Perform frequency analysis" button at the bottom of the main window.

**Search Results Area (Left):**

- Text input field: pos
- Buttons: Search, More ▾, History ▾
- Text: 399 matches in 2 documents
- Buttons: Export, Frequency Analysis (highlighted)
- Corpus List: pcc2, Potsdam\_Commentary\_
- Visible: All
- Filter: Name (pcc2), Texts (2), Tokens (399)

**Main Window (Right):**

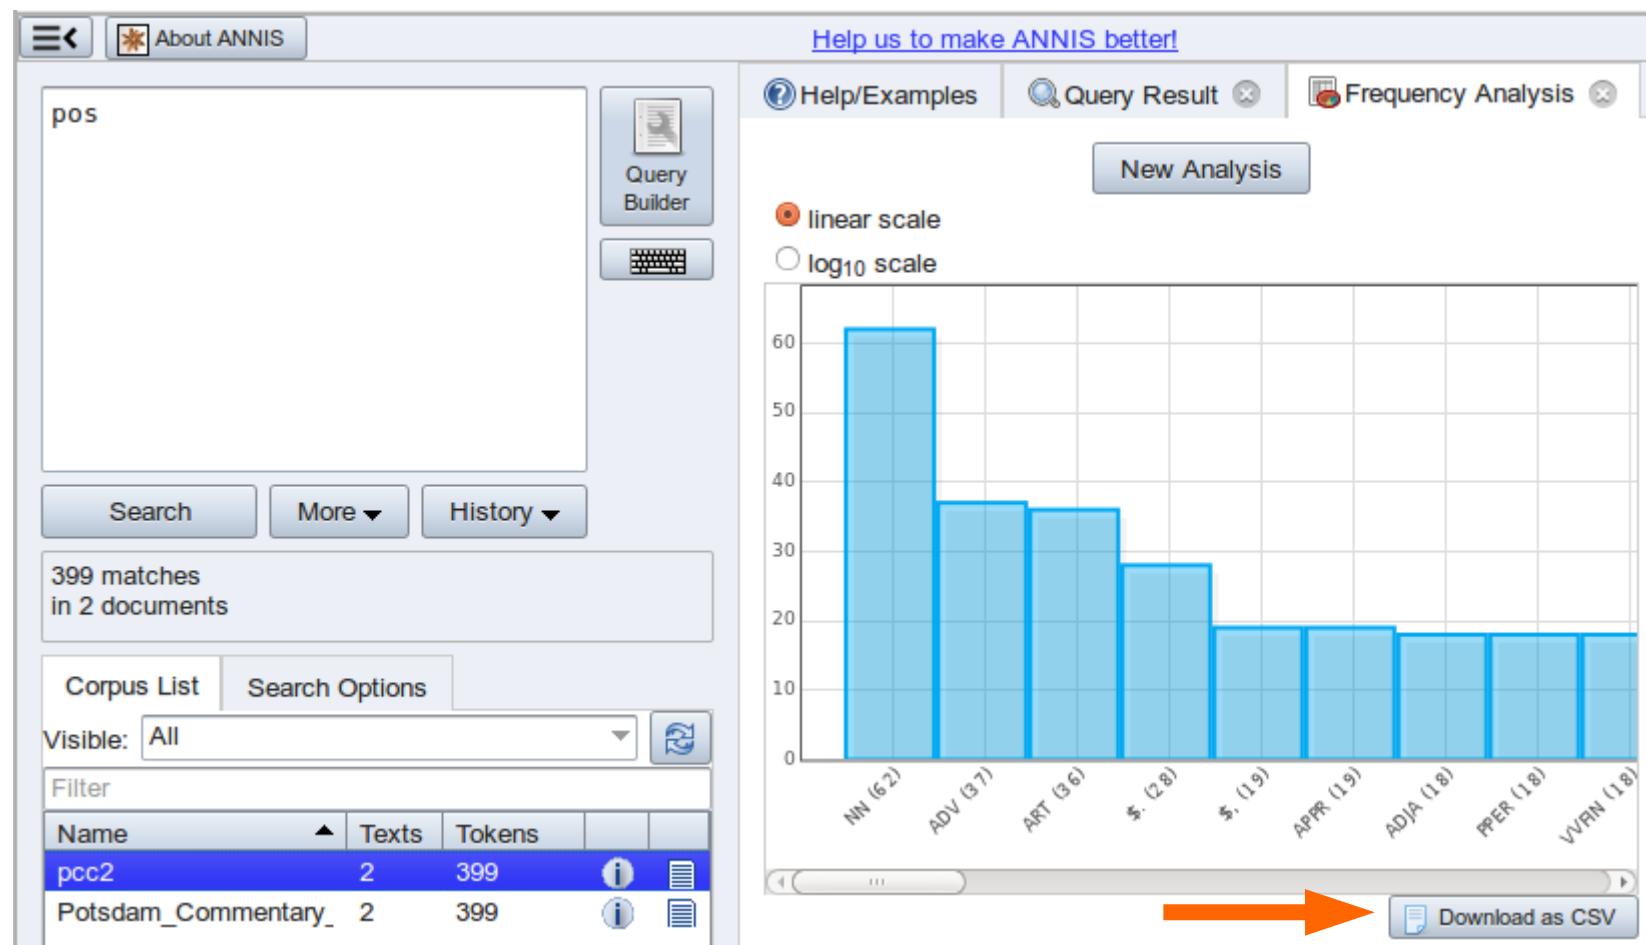

- Help us to make ANNIS better!
- Tab bar: Help/Examples, Query Result, Frequency Analysis (highlighted)
- Selected corpora: pcc2
- Query to analyze: pos
- Table:

	Node num	Selected annotation of	Comment
1	1	pos	automatically created from pos
- Buttons: Add, Delete selected row(s), Perform frequency analysis (highlighted), Automatic mode (checkbox checked)

# ANNIS: Search and Visualization in Multilayer Linguistic Corpora

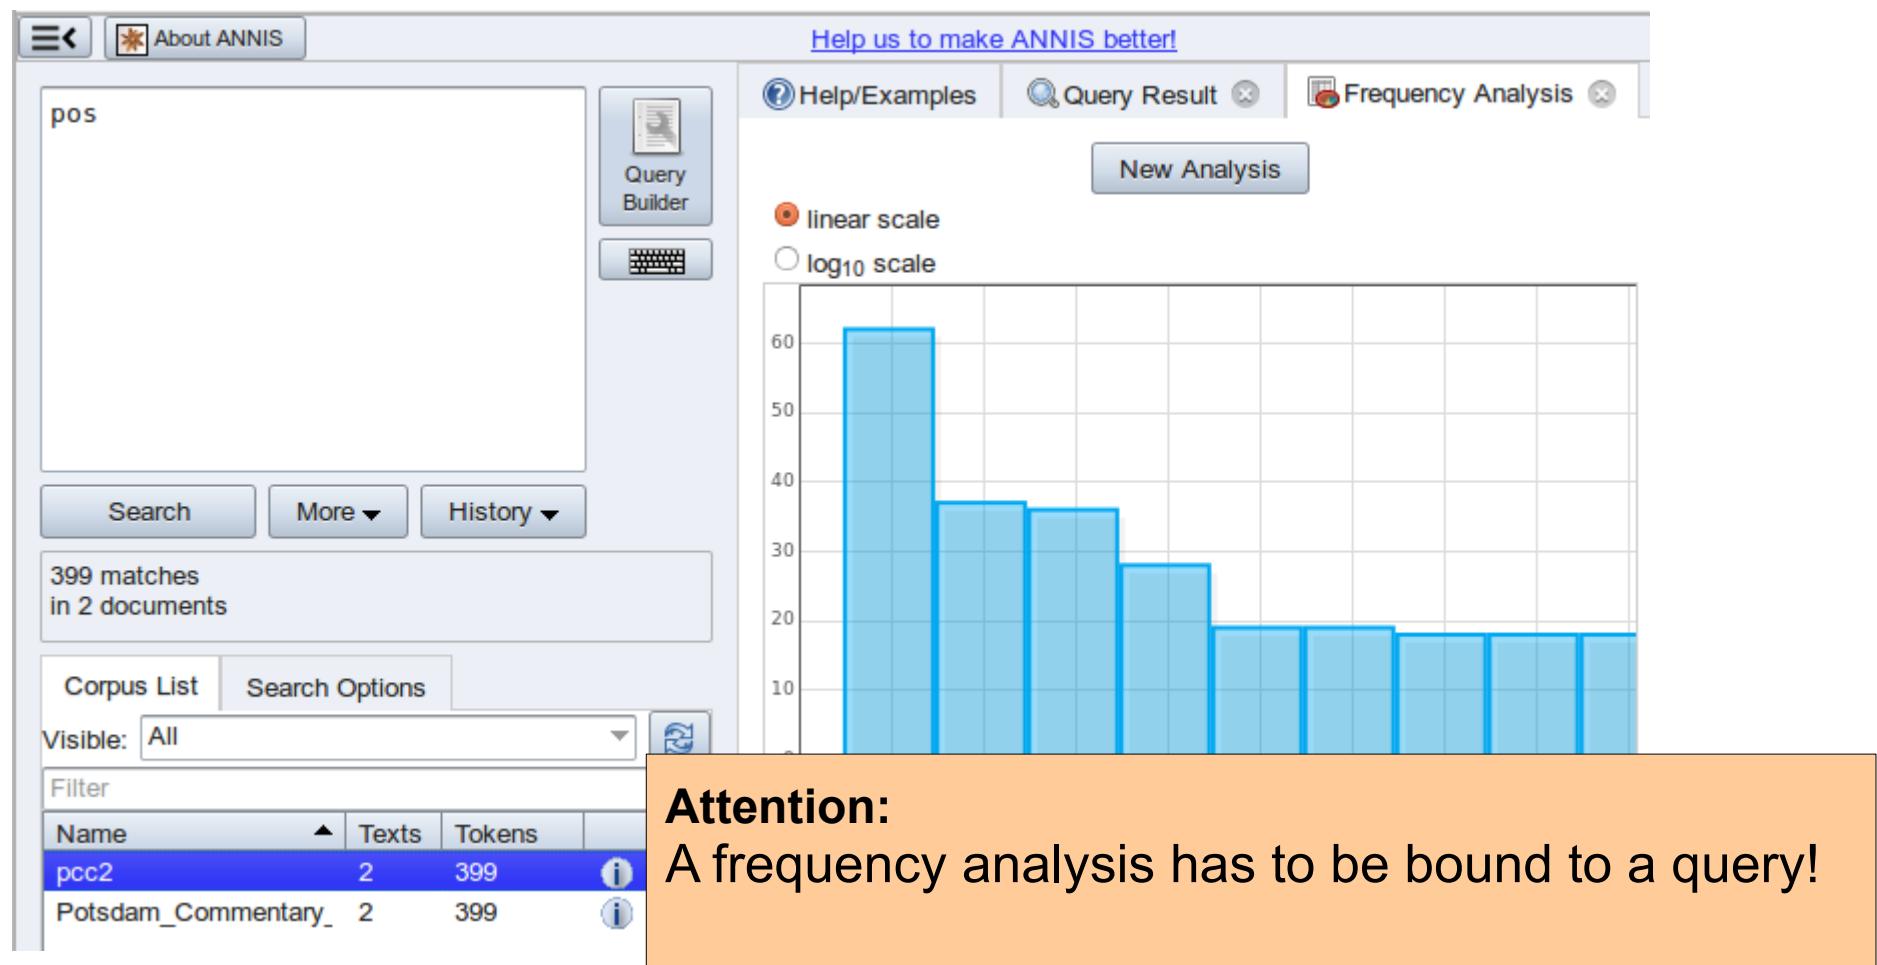

## Frequency analysis

# ANNIS: Search and Visualization in Multilayer Linguistic Corpora

## Frequency analysis

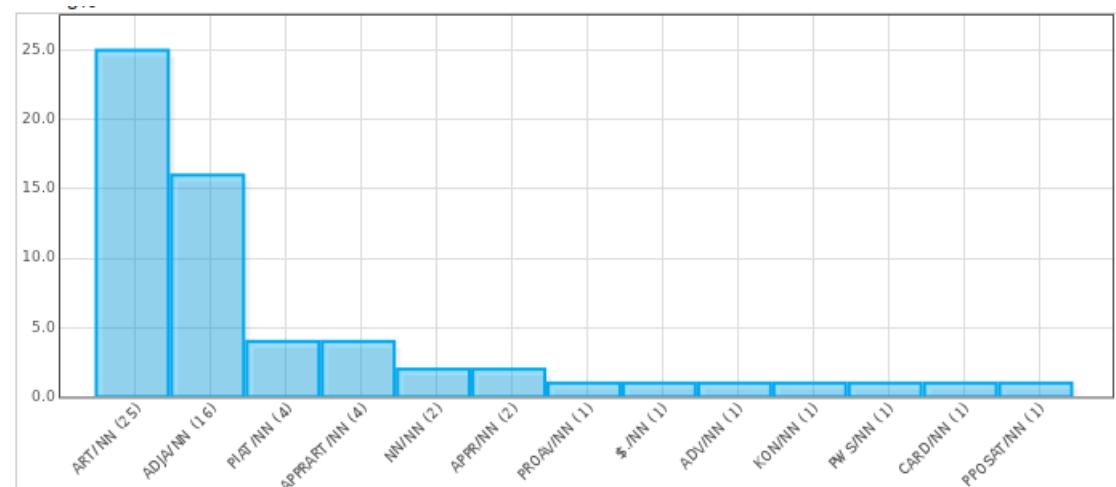

# ANNIS: Search and Visualization in Multilayer Linguistic Corpora

## Frequency analysis

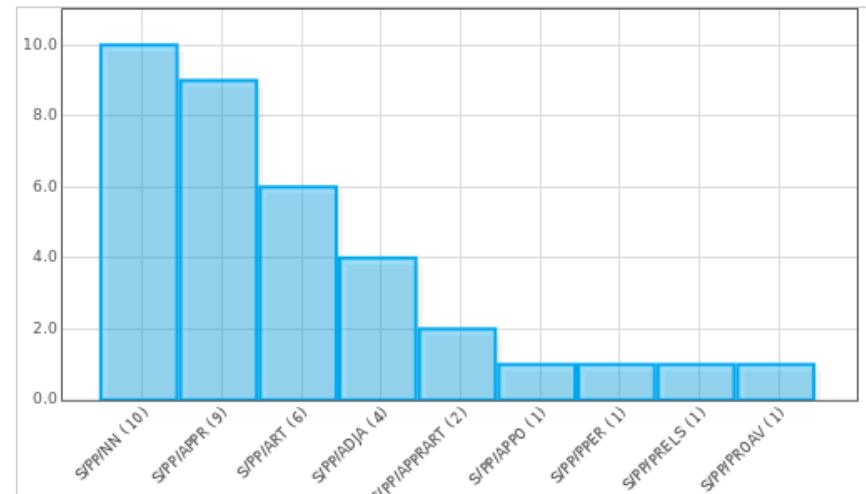

- What are the most frequent part-of-speech tags followed by a noun?

```
pos . pos="NN"
```

- What are the most frequent part-of-speech tags in a prepositional phrase, which is in a sentence?

```
cat="S" > cat="PP" > pos
```

- Sometimes the context is too small

pos . pos & #1 != #2

## Variables

- Question:

„Die“ followed by „Jugendlichen“ both being dominated by a prepositional phrase which is dominated by a sentence

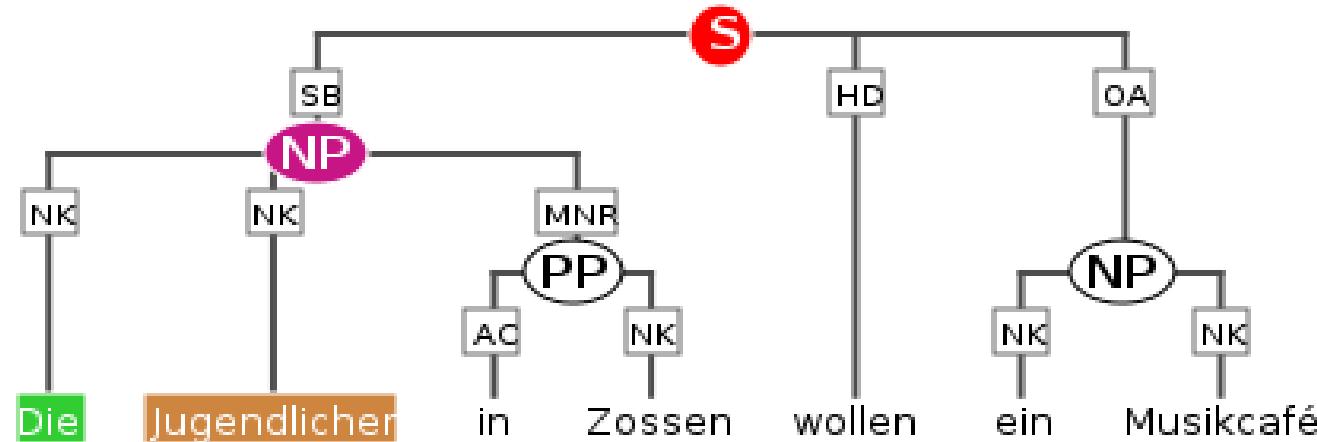

Simplified:

`cat="S" > cat="NP" > "Die" . "Jugendlichen" & #2 > #4`

## Variables

- Question:

„Die“ followed by „Jugendlichen“ both being dominated by a prepositional phrase which is dominated by a sentence

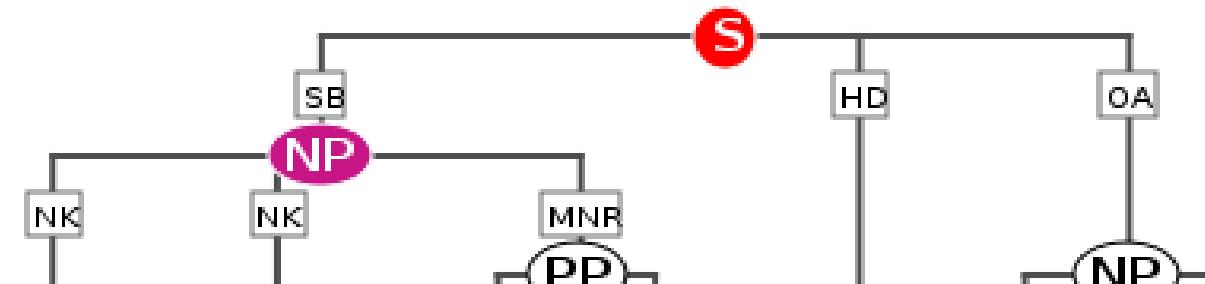

Simplified:

`cat="S" > np#cat="NP" > "Die" . jug#"Jugendlichen" & #np > #jug`

## Variables

- Question:

„Die“ followed by „Jugendlichen“ both being dominated by a prepositional phrase which is dominated by a sentence

**Variables and numbers can be mixed:**  
`cat="S" > np#cat="NP" > "Die" . "Jugendlichen" & #np > #4`

Simplified:

`cat="S" > np#cat="NP" > "Die" . jug#"Jugendlichen" & #np > #jug`

- Question (simple OR):

A part-of-speech tag which is a noun, an attributive adjective or an article

pos=/(NN)|(ADJA)|(ART)/

(in pattern search)

- Question (simple OR):

A part-of-speech tag which is a noun, an attributive adjective or an article

```
pos=/\b(NN)|(ADJA)|(ART)\b/ (in pattern search)
```

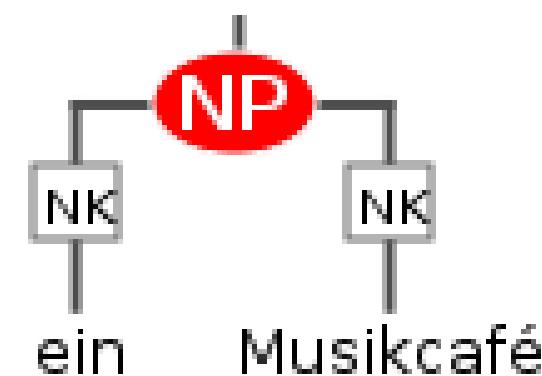

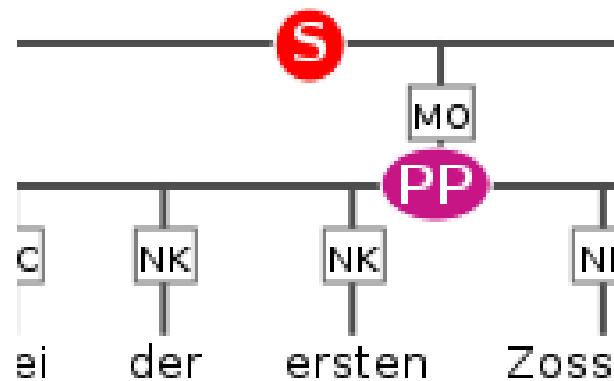

- OR for expressions

```
pos="NN" | pos="ADJA" | pos= "ART"
```

- Question (complex OR):

A prepositional phrase, which is dominated by a sentence,  
or just a nominal phrase

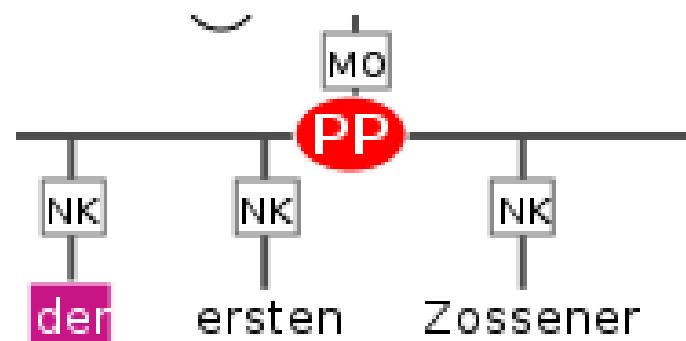

(cat="S" > cat="PP") | cat="NP"

- Question (nested OR):

A prepositional phrase, which dominates a noun, an attributive adjective or an article

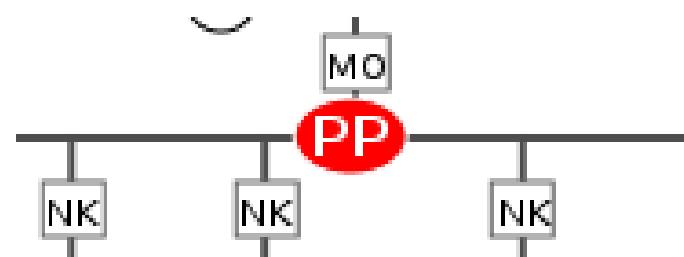

```
a#cat="PP" &  
(b#pos="NN" | b#pos="ADJA" | b#pos= "ART") &  
#a > #b
```

- Question (nested OR):

A prepositional phrase, which dominates a noun, an attributive adjective or an article

**Attention:**

All expressions in brackets have to use the same variable  
... & (**b#pos="NN"** | **b#pos="ADJA"** | **b#pos= "ART"**) & ...

**a#cat="P**

(**b#pos="NN"** | **b#pos="ADJA"** | **b#pos= "ART"**) &  
**#a > #b**

# ANNIS: Search and Visualization in Multilayer Linguistic Corpora

## Document browser

- Displays the entire text of a document

The screenshot shows the ANNIS Document browser interface. On the left, there's a search bar for AQL queries and a 'Query Builder' button. Below it are 'Search', 'More', and 'History' buttons. A status message says 'Status: Ok'. At the bottom, there's a 'Corpus List' tab and a 'Visible' dropdown set to 'All'. The 'Texts' tab is highlighted in the 'Corpus List' table, which shows 'Name: pcc2', 'Texts: 2', and 'Tokens: 399'. To the right is a main panel showing a table with document details. The table has columns for 'document name', 'corpus path', 'visualizer', and 'info'. It lists two documents: '11299' with 'pcc2 > 11299' and 'full text' (with an arrow pointing to it), and '4282' with 'pcc2 > 4282' and 'full text'. There are also 'Help/Examples' and 'pcc2' buttons at the top of the main panel.

document name	corpus path	visualizer	info
11299	pcc2 > 11299	<a href="#">full text</a>	
4282	pcc2 > 4282	<a href="#">full text</a>	

# ANNIS: Search and Visualization in Multilayer Linguistic Corpora

## Document browser

The screenshot shows the ANNIS search interface. At the top left is a search bar with placeholder text "Please enter AQL query". To its right are three buttons: "Query Builder" (with a document icon), "Keyboard" (with a keyboard icon), and "Help/Examples" (with a question mark icon). Above the search bar is a link "About ANNIS" with a gear icon. The top right features a blue header bar with the text "Help us to make ANNIS better!" and three tabs: "Help/Examples", "pcc2" (selected), and "pcc2 > 11299 - ...". Below the header is a section titled "pcc2 > 11299 - Visualizer: full text" containing a block of German text. At the bottom left is a "Corpus List" tab and a "Search Options" tab. Under "Corpus List", there's a dropdown menu "Visible: All" and a "Filter" section with a table showing one entry: "pcc2" with "2" texts and "399" tokens. There's also an "i" icon and a "grid" icon next to the table.

About ANNIS

Help/Examples pcc2 pcc2 > 11299 - ...

pcc2 > 11299 - Visualizer: full text

Feigenblatt Die Jugendlichen in Zossen wollen ein Musikcafé . Das forderten sie bei der ersten Zossener Runde am Dienstagabend . Dass die Politiker der Stadt dafür Verständnis haben , ist loblich . Mit dem Treffen im Rathaus ist somit auch ein Dialog zwischen den Generationen angestoßen . Dass die beiden geladenen Jugendlichen im Laufe des Abends immer weniger zu Wort kamen , war sicher keine böse Absicht , ärgerlich ist es trotzdem . Und aberwitzig dazu . Es entbehrt nicht der Komik , wenn sich drei Erwachsene - Karola Andrae ( Bürgerbündnis/FDP ) , Susanne Michler ( CDU ) und Joachim Zanow ( SPD ) - darüber streiten , was Jugendliche wollen und brauchen , ohne auf die Idee zu kommen , sie selbst zu fragen . Und das , obwohl sie ihnen gegenüber sitzen . Die Jugendlichen wurden somit zum bloßen Feigenblatt degradiert . Nicht über sondern mit ihnen hätten die Politiker reden sollen . Damit ist eine große Chance vertan . Vielleicht klappt es bei der nächsten Runde Anfang 2002 . Dann werden auch mehr Jugendliche eingeladen . In der Gruppe können sie sich hoffentlich mehr Gehör verschaffen . Vielleicht finden dann auch Vertreter von PDS und Gewerbeverein ihren Weg ins Rathaus . Die glänzten diesmal noch mit Abwesenheit .

Submit problem report

The attached screenshots show three separate ANNIS search results. Each result page displays a list of documents with their names, IDs, and various linguistic annotations like part-of-speech tags (e.g., Adj, Verb) and dependency relations (e.g., 'Fingerfest' -> 'Die', 'Zugreichen' -> 'in', 'Zonen' -> 'wissen'). The results are filtered by a query like 'Path: p[0]>P[0]'. The interface includes standard search controls like 'Search' and 'More'.

- ANNIS comes in two flavors
  - A server version
  - A desktop version (ANNIS kickstarter)
  - Both are downloadable at:  
<http://www.sfb632.uni-potsdam.de/annis/>
- ANNIS is open source (Apache license 2.0) and hosted on github
  - <https://github.com/korpling/ANNIS>

Thanks for your attention!  
Any questions?
