

GERMAN ‘ALSO’ AS DISCOURSE MARKER ACROSS REGISTERS AND SPEAKER GROUPS

ANNIKA LABRENZ (HUMBOLDT-UNIVERSITÄT ZU BERLIN)

SYNCHRONIC POLYFUNCTIONALITY

- developmental path towards DM through semantic bleaching and syntactic disintegration (e.g. Traugott 2012, Wiese/Bunk 2019)
- reinterpretation of the core-meaning results in:
 - heterosemes in distinctive word classes
 - polysemy in one word class
 - contextually triggered pragmatic interpretation (Diewald 2006)

RESEARCH QUESTIONS

What are the loci for variation in the use of the different synchronic functions?

- RQ I Does register have an influence on variation in the use of ‘also’?
- RQ II Does the language background (bi- vs. monolingual, minority vs. majority language) have an influence on the distribution across registers?

REGISTERS AND SPEAKER GROUPS

- registers associated with functional purposes and situational settings:
 - systematic distribution of functions across registers expected, e.g. more DMs in spoken mode
- speaker groups:
 - societal status of a language → communicative situations
 - heritage speakers (HS): less formal settings
 - bilingual and monolingual speakers: communicative situations from formal to informal settings

minority context

majority context

DATABASE - RUEG-DE_0.4 (WIESE ET AL. 2019)

German speakers	short	language status	number of speakers	tokens
bilinguals (Germany)	Debi_majD	majority	165	96,424
bilingual heritage speakers (US)	Usbi_minD	minority	30	12,319
monolingual speakers (Germany)	DEmo_majD	majority	64	39,207

Registers: informal-written, informal-spoken, formal-written and formal-spoken

CATEGORISATION OF GERMAN 'ALSO'

→ Semantic bleaching + syntactic disintegration →

CATEGORISATION OF GERMAN 'ALSO'

syntactically integrated

Function: signalling a consequence, modus ponens ($p \rightarrow q$)

Ich war nicht mehr benötigt also bin ich dann gegangen. (USbi04FD_fwD)
'I was no longer needed so I left.'

CATEGORISATION OF GERMAN 'ALSO'

syntactically integrated
Function: signals a specification or elaboration

ich glaube es war schon der Ball den der Mann also dieser junge Mann hingeworfen hat (DEbi01MR_fsD)
'I think it was *schon* the ball that the man, *also* this young man, threw down'

CATEGORISATION OF GERMAN 'ALSO'

partly syntactically integrated

Function: signals a correction or repair, signals the renewal of a morphological or syntactical structure and/or a correction on content level

und die mit dem Hund die haben direkt nur diese **also** die haben irgendwelche Sachen fallen gelassen
'and the ones with the dog they only have these directly, *also* they have dropped things.'

(DEmo77MD_isD)

CATEGORISATION OF GERMAN 'ALSO'

syntactically not integrated

Functions: signalling the start of a narrative, segmentation marker (e.g. before an evaluation), attention-getter, filler

also ich bin gerade so einen Parkplatz entlanggelaufen (DEbi | IMR_isD)
,also I was walking along the parking lot'

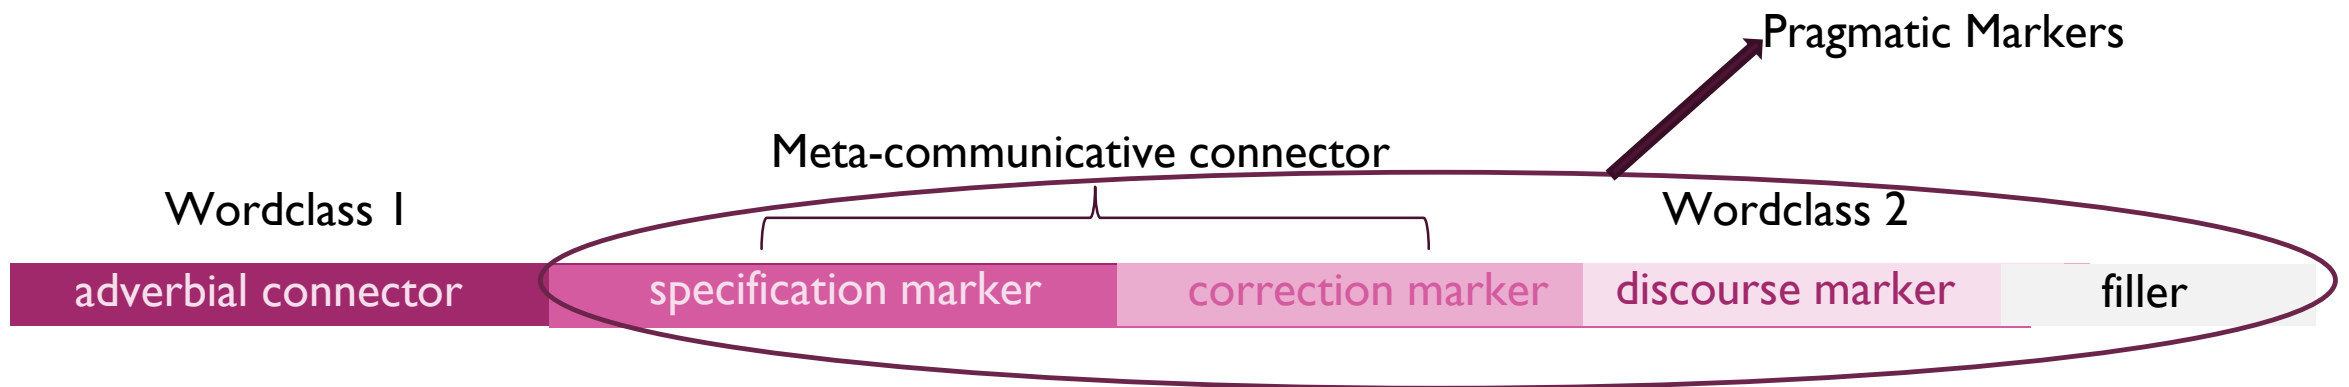

CATEGORISATION OF GERMAN 'ALSO'

syntactically not integrated
Function: gain time during speech production

es wird nicht **also** teuer (DEbi70FT_iwD)
,it will not be *also* expensive'

CATEGORISATION OF GERMAN 'ALSO'

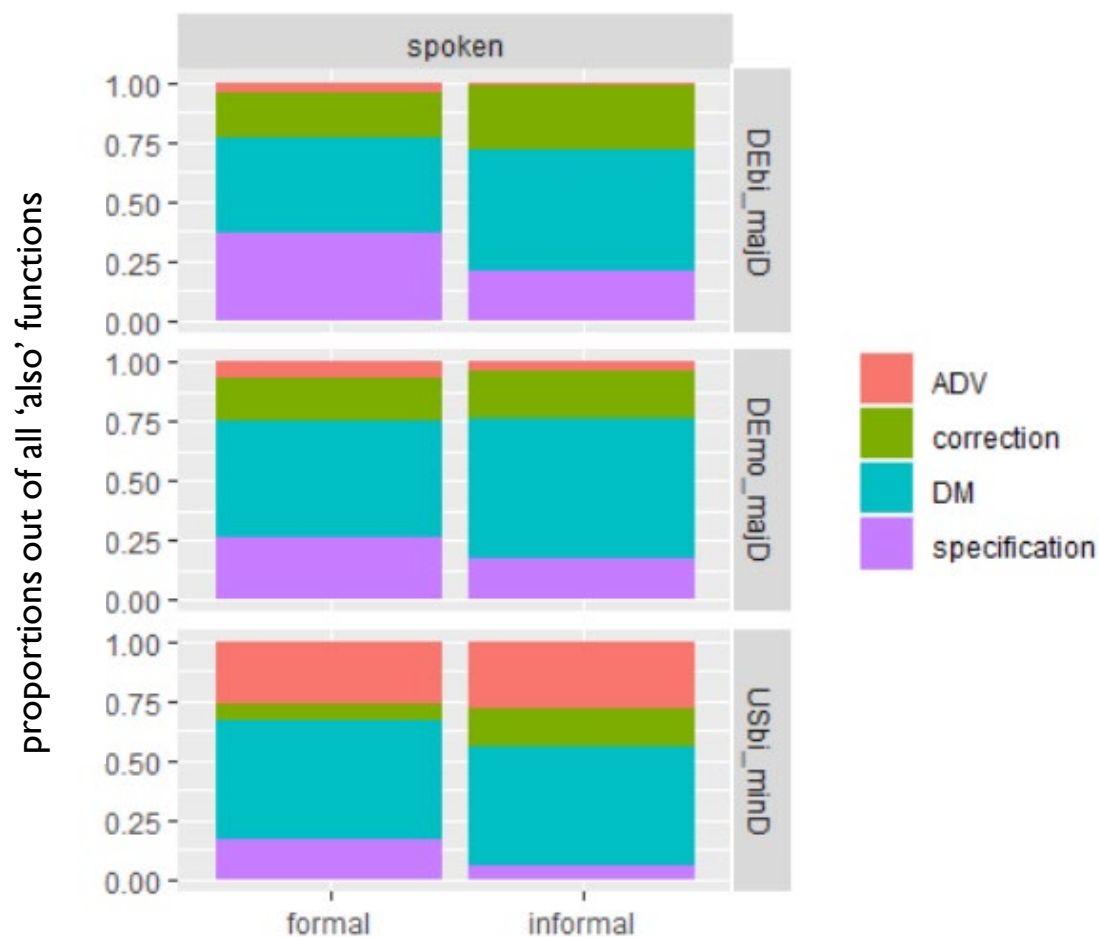

→ Semantic bleaching + syntactic disintegration →

CRITERIA FOR DISCOURSE MARKERS (DM)

- no referential content
- do not contribute to the propositional meaning and truth value of an utterance
- operate on the level of discourse, oriented towards discourse contents or discourse participants
- not fully syntactically integrated
- polyfunctional
- subcategory of pragmatic markers

RESULTS

proportions of functions of 'also' in a specific group and register

total number of 'also': n=571

spoken mode: n=547

written mode: n=32

category	N*
ADV	38
specification	142
correction	115
DM	283
filler	38

*absolute numbers

DM – RELATIVE FREQUENCIES PER SUBCORPUS

USbi_minD:
formal-spoken \geq informal-spoken

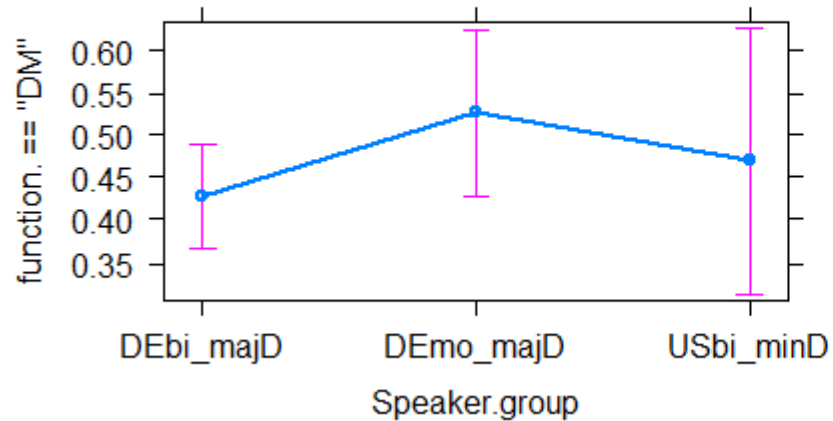

DEbi_majD + DEmo_majD:
informal-spoken $>$ formal-spoken

DEbi_majD: informal-written

DM – GENERALISED MIXED MODEL

effect plot: speaker-group

effect plot: setting

Fixed effects:

	Estimate	Std. Error	z value	Pr(> z)

modewritten	-0.2673	0.5531	-0.483	0.628847	

ADV - RELATIVE FREQUENCIES PER SUBCORPUS

DEbi_majD + DEmo_majD:
almost no ADV use

USbi_minD:
more ADV overall; formal-written

MAIN FINDINGS

What are the loci for variation in the use of different synchronic functions?

RQ I Does register have an influence on variation in the use of ‘also’?

- primarily in spoken mode
- informal situations associated with significantly stronger DM use
- formal situations associated with significantly stronger use as specification marker

RQ II Does the language background (bi- vs. monolingual, minority vs. majority language) influence distributions across registers?

- influence of majority vs. minority context

DISCUSSION

association of functions and registers

- 'also' as DM more frequent in informal setting
- bilinguals with German as majority language extend the use to informal-written
- 'also' as specification marker more frequent in formal settings

HS differ from bi- and monolinguals

- **different discursive strategies:**
 - use DMs in the formal-spoken register to deal with the cognitive load the formal situation might trigger
 - mark specification differently (?)
- **correlation between pragmaticalisation process / synchronic polyfunctionality and majority vs. minority status of a language**
